

Company Profile

Business Description

As a “TechnologyHouse”, UMT United Mobility Technology AG stands for the development and implementation of customized solutions for the digitalization of business processes. As a FinTech company, UMT licenses one of the largest mobile payment platforms in Europe and acts as a central interface between all relevant parties such as large retail chains, banks, bonus program providers and end consumers. UMT's technology is in live operation at around 16,000 stores and 71,000 checkouts. In Germany alone, over 14 million users have been able to use UMT's mobile payment technology for more than 6 years.

The IT and consulting expertise built up over a decade in the field of e-commerce and payment is the basis for value-creating investments in companies with a low level of digitalization. The focus of activities is on medium-sized companies with future-oriented and stable business models. The aim is to unlock new growth potential through active further development, particularly in the area of digitization, and a forward-looking buy-and-build strategy for the specific consolidation of a fragmented market, and thus to realize significant revenue and earnings growth with sustainable profitability and steady cash flow.
